DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: claim 1 (figure 3) and claim 2 (figure 4).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2611

If applicant elects the species of figure 3 (which reads on claim 1), applicant is further required to elect a subcombination as described below as:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-4, drawn to current adjusting load means, classified in class 330, subclass 61R.
- II. Claims 1 and 5-12, drawn to superposing bias voltages, classified in class 330, subclass 127.
- III. Claim 1 and 13-14, drawn to transformers, switching, and filtering, classified in class 725, subclass 149.

Inventions I., II., and III. are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I., II., and III. has separate utility such as

- I. Use of current adjusting load means in other electrical devices such as a battery.
- II. Use of superposing bias voltages in other communication devices such as personal computer circuitry
- III. Use of transformers, switching, and filtering in other systems such as an audio system.

See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
